

Service & Calibration

We are proud to be one of the worldwide official service providers for GFG GmbH's full range of equipment as well as an OEM Service Centre and have a full Service & Calibration facility at our Head Office.

Our Field Service Engineers offer a first-class service on-site for our own and other manufacturers' equipment.

Maintenance Contracts

We recommend biannual servicing and calibration of all gas detection equipment, whether portable or fixed-point detectors.

GfG's **TOTALCare** maintenance packages are completely transparent and tailored to suit your needs. There are no hidden extras. These packages can include call-outs, selected replacement parts and even accidental damage.

Whatever your requirements are whether it be annual calibration or more frequent calibrations, we are able to help, just contact us on [01376 561463](tel:01376561463) or service@gfggas.co.uk

GfG's customer's needs take priority, and we take pride in the after sales support service we provide. More importantly, with life safety equipment it is essential that it is maintained regularly and correctly. At GfG we aim to provide a true equipment cost of ownership through **TOTALCare**.

Capital expenditure cost can be spread over time with our flexible payment plans or by leasing with additional discounts for prepaid **TOTALCare** packages.

Portable gas detectors can also be hired, short or long-term.
