D-ReX. Designed for Versatility

Gases are used in many areas of application and process steps of the semiconductor industry. This results in a wide variety of associated requirements for measuring methods, sensors, measuring ranges and communication.

The D-ReX allows you to select the ideal combination of measurement method and sensor for every requirement. Benefit from the DIN-rail mounted gas detector's easy-to-understand user interface, its modern, future-proof technology, and simple and cost-effective maintenance.

Versatility in measurement methods
The D-ReX gas detector series lets you choose between different measuring methods to ensure you are using the ideal solution for every requirement.

» **D-ReX PoU (Point of Use)**
  Monitoring of gases at the point of use using the diffusion method.

» **D-ReX PoI (Point of Installation)**
  Monitoring of gases by diffusion method using a remote sensor cartridge. Distance between the D-ReX and the cartridge can be up to 1200 meters / 4000 feet.

» **D-ReX PoS (Point of Sampling)**
  Monitoring of gases via extraction using a built-in pump (suction distance up to 30 meters). The sensor is situated within the D-ReX. Furthermore, the D-ReX PoS is the only gas detector in the world that offers optional monitoring of the hose line for leaks. The Line Integrity Monitoring (LIM) technology continuously works to prevent unnoticed absorption of secondary air.

» **D-ReX PoS with pyrolyzer**
  The Py-ReX is the matching pyrolyzer for the D-ReX PoS to monitor gases that are either too toxic or chemically inactive to be measured directly. The Py-ReX is simply mounted between the suction hose and the D-ReX and breaks the monitored gas down into harmless, easy-to-detect components.
